COMP307: Group Project

1. Marking Allocation

Deliverable	Weighting (%)
Game idea and overview	10
First Prototype	20
Final Deliverable	70

First Prototype (WIP)	Weighting (%)
Movement, world interaction and mechanics	30
NPCs and/or basic AI	20
Shaders	20
Win/loss conditions	20
Uniqueness and/or Proposed Extensions	10

Final Deliverable	Weighting (%)
Movement, world interaction and mechanics	30
NPC and AI	30
Shaders	30
Win/ Loss Conditions	10
Uniqueness and/or Extensions (Bonus)	10

2. Marking Memo

Criteria	0	1	2	3	4
Movement, world interaction and mechanics	Not sufficiently attempted	• PC and camera positions implemented correctly • Movement, world interaction, and mechanics requires significant improvement	• PC and camera positions implemented correctly • At most 2 of movement, world interaction, and mechanics requires significant improvement	• PC and camera positions implemented correctly • Movement, world interaction, and mechanics implemented correctly	• PC and camera positions implemented correctly • Movement, world interaction, and mechanics implemented correctly • Good aesthetics • Accurately simulated physics
NPC and AI quality	Not sufficiently attempted	• NPCs present but no evidence of game AI	• Minor edits to prefabs or basic scripting. • Some NPCs use simple AI	• Some NPCs are developed from first principles • AI responds to player behaviour	• Some NPCs are developed from first principles • NPCs show advanced AI behaviour • Behaviour changes dynamically based on player actions
Win/ Loss Conditions	Not sufficiently attempted	• Basic win/loss conditions implemented	• Win/loss conditions based on the player actions	• Multiple win/loss scenarios based on different player behaviours	• Multiple complex win/loss conditions • Integrated with game mechanics or narrative elements
Shaders	Not sufficiently attempted	• One custom shader attempted	• One shader sufficiently implemented and functioning using HLSL.	• Multiple shaders implemented	• Extensive use of shaders using HLSL or GLSL

				• Some visual improvements	• Custom shaders applied across several aspects (e.g., lighting, water, effects) • Substantially enhances game visual
Uniqueness and/or Extensions	• No software re-use • No effort was made to add a personal touch to the game				• Evidence of software re-use • Evidence a personal touch and creativity added to the game • Additional extensions beyond the scope of the project
